The Truth About Climate Change

with David Attenborough

Our world is warming at an unprecedented rate.

Naturalist and television personality David Attenborough takes us on a journey to discover how global warming is changing the planet, and explains why this is far beyond any normal allowance for cyclical fluctuation.

He investigates solutions being employed around the world, and shares his perspective that although some changes are already in motion no matter what we do, we may be able to act to prevent a catastrophe.

Join us for a discussion of possible solutions to our climate crisis.
